

LeaseOS Canada Hours-of-Service Compliance Logbook

Alberta-focused rules, federal interprovincial rules, 160 km records, sleeper-berth controls, and duty-status forms

Version: 2026-09-17. **Purpose:** LeaseOS / Claude project knowledge and compliance-engine specification.

Important: This is a compliance design aid, not legal advice. Production logic must select the rule set from the carrier's operating status, vehicle, jurisdiction, trip and permits/exemptions.

Key correction: Staying inside 160 km does not exempt a driver from hours-of-service limits. It can exempt a qualifying driver from the normal daily log/ELD record only when every applicable condition is met and the carrier keeps the required records.

1. Alberta - which HOS regime applies?

Operation	Regime	LeaseOS treatment
Carrier operates solely within Alberta and is provincially regulated.	Alberta Drivers' Hours of Service Regulation.	Apply Alberta provincial HOS. Alberta says provincially regulated carriers do not currently have to install/use ELDs solely because of the federal mandate.
Extra-provincial undertaking: covered commercial operations cross provincial/territorial or international boundaries.	Federal Commercial Vehicle Drivers Hours of Service Regulations.	Apply federal HOS/ELD rules. Federal status can apply across the carrier's covered drivers, not only on the day a border is crossed.

2. Alberta provincial 160 km daily-log exemption

A daily log is not required only when **all** applicable Alberta conditions are satisfied:

- driver stays within a **160 km radius of the home terminal**;
- driver **returns to the home terminal** and is released from work within **15 hours** from the start of the work shift; and
- carrier keeps accurate start/end time records for at least **6 months**.

If a condition fails, the driver must begin a daily log and account for the required preceding duty history. The 160 km provision is a record-keeping exemption only.

3. Federal 160 km record-of-duty-status / ELD exemption

Under federal rules, the normal record-of-duty-status requirement does not apply when the driver is instructed to drive within a **160 km radius of the home terminal**, returns there each day to begin at least **8 consecutive hours off duty**, and the carrier keeps accurate cycle/on-duty records and supporting documents for at least **6 months**. Permit/exemption status can alter eligibility.

A qualifying federal 160 km driver can therefore be exempt from the normal ELD/daily record, but the carrier still needs records proving compliance.

4. Core federal south-of-60 limits

Control	Limit / requirement
Driving in a day	No driving after 13 hours of driving time in the day.
On-duty in a day	No driving after 14 hours of on-duty time in the day.
Work shift	No driving after 13 hours driving, 14 hours on duty, or the 16th elapsed hour, subject to detailed sleeper-berth calculations.
Daily off-duty	Generally 10 hours off duty in a day, including at least 8 consecutive hours, subject to permitted deferral/sleeper provisions.
Cycle 1	70 hours on duty in 7 days; 36 consecutive hours off duty to reset.
Cycle 2	120 hours on duty in 14 days, including the 70-hours-in-7-days control; 72 consecutive hours off duty to reset.

5. Sleeper berth - LeaseOS logic

Sleeper berth does **not** authorize exceeding legal driving/on-duty limits. For a single driver under federal rules, qualifying off-duty time may be split into no more than two sleeper periods; neither can be shorter than 2 hours and together they must total at least 10 hours. The regulation still applies combined 13-hour driving and 14-hour on-duty controls and a special calculation for the 16-hour elapsed-time rule.

Do not make sleeper use an automatic ELD trigger. Determine log/ELD status separately. When split sleeper is used, preserve precise timestamps and validate both periods before treating the split as compliant.

6. Recommended LeaseOS states

RADIUS_EXEMPT, LOG_REQUIRED, ELD_REQUIRED, PAPER_ALLOWED, ELD_MALFUNCTION, SLEEPER_SPLIT_PENDING, SLEEPER_SPLIT_VALID, HOS_WARNING, DRIVING_PROHIBITED. Convert a radius-exempt day to LOG_REQUIRED as soon as an exemption condition fails.

7. Radius Time Record - Alberta / Federal Short-Haul

Use when claiming a 160 km logbook exemption. LeaseOS should retain the electronic equivalent plus supporting records.

Driver name		Carrier	
Date		Home terminal	
Unit #		Trailer #	
Rule set	Alberta provincial / Federal	Cycle	1 / 2 / N/A
Shift start		Shift end / released	
Total on-duty		Total driving	
Max distance from terminal		Returned to terminal?	Yes / No
Inside 160 km entire shift?	Yes / No	Supporting records retained?	Yes / No

Driver certification: I certify that this record accurately reflects my duty status and that I met the applicable radius-exemption conditions.

Driver signature: _____ Date: _____

8. Daily Record of Duty Status - LeaseOS Worksheet

For regulated production use, LeaseOS must capture every field required by the applicable regulation. If an ELD is mandatory, this PDF is not a substitute for a Transport Canada-certified ELD.

Driver		Date	
Co-driver		Day start time	
Carrier		Cycle	1 / 2
Home terminal		Principal place of business	
Unit(s)		Trailer(s)	
Start odometer		End odometer	
Distance driven		Personal-use km	

	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	Total
Off duty																									
Sleeper berth																									
Driving																									
On duty - not driving																									

Duty-status changes / remarks - record time, location, status/event, sleeper split, deferral, adverse condition, personal use, ELD malfunction or other required annotation:

Time	Location	Status / event	Remarks

Driver signature / certification: _____

9. Canada-wide implementation rule

Canada does not use one identical provincial short-haul/logbook rule for every intra-provincial carrier. Provinces and territories regulate intra-provincial undertakings; federal rules govern extra-provincial undertakings. LeaseOS should select the jurisdiction profile from the carrier's legal operating status and trip, not merely the driver's current GPS province.

Production profiles should separately version Alberta, British Columbia, Saskatchewan, Manitoba, Ontario, Quebec, New Brunswick, Nova Scotia, Prince Edward Island, Newfoundland and Labrador, Yukon, Northwest Territories and Nunavut. Each should store applicability thresholds, daily/work-shift limits, cycles, radius/log exemptions, ELD rules, special/oilfield permits, north-of-60 rules, retention periods and required fields.

Fail-closed instruction: Never infer that sleeper-berth use permits extra statutory driving/on-duty time. Never infer that every driver inside 160 km is log-exempt. Evaluate every condition first; if required data are missing, require the safer/more complete record.
